

DATA SHEET

AlertSite Security Vulnerability Scan

**Scan from outside
the firewall.**

**Scan Internet devices,
services, ports, routers
and firewalls daily.**

**No software to install,
configure or maintain.**

Because of increasing security intrusions, companies are vulnerable to attack even with firewalls, anti-virus and penetration safeguards in place. Secure your Web sites and servers from hackers and intruders. AlertSite's Security Vulnerability Scan identifies over 14,000 vulnerabilities in real time, categorizes the risks and provides solutions. Our powerful, up-to-date and easy-to-use remote security scan ensures your Web sites, servers, firewalls and Internet-connected devices are free of known vulnerabilities.

DATA SHEET

AlertSite Security Vulnerability Scan

The AlertSite Security Vulnerability Scan ensures your site is secure and protected against malicious attacks.

Key Features

- Daily scan of all Web services and ports, as well as routers, firewalls and any Internet-connected device.
- Detailed reports on detected services, open IP ports and vulnerabilities.
- Immediate alerts sent when vulnerabilities are detected.
- Ongoing daily e-mails outlining vulnerabilities detected and patched.
- False-positive vulnerabilities excluded from future scans.
- Regular updates of vulnerability data, drawing from hundreds of worldwide sources.

Where Do Vulnerabilities Show Up?

Vulnerabilities are continually discovered on all types of computer systems. It's a race between the good guys (security professionals) and bad guys (hackers and crackers). Security professionals rush to update Web sites by implementing patches and downloading fixes while expert hackers write malicious code to exploit these vulnerabilities. Once an automated hacking tool is developed, it proliferates rapidly across the Internet. If you do not update your Web site security on a continual basis, your Web site is in danger. Changes in your Web server or other Internet-connected devices also expose you to security hazards. Therefore, you need to continuously audit and update your security status. The AlertSite® Security Vulnerability Scan meets this need for you in a way that requires no installation, no set-up, no new hardware, no software development, no security expertise and no special training.

AlertSite Management Console

The Web-based console provides secure access to the latest vulnerability data and allows you to view vulnerabilities by device or device group, sort and view detailed remediation steps and create custom alert levels. At any time and from any location, you can launch scans, examine vulnerability details or trends and access patch information. In addition, you can configure alerts, assign user roles and generate custom reports.

Unparalleled Service and Support

AlertSite is a leading provider of Web performance measurement, systems monitoring and security vulnerability scanning products that ensure a customer's critical Web-based services are always available and running at peak performance. AlertSite services benefit all types and sizes of businesses and organizations.

Founded in 1998, AlertSite is based in South Florida and maintains over 40 global monitoring stations in highly qualified data centers on every continent but Antarctica. Our global network monitors the availability and performance of your Web site, Web-based applications and transactions wherever they are operating across the globe. When trouble occurs, AlertSite helps you isolate the location of the problem.

AlertSite performance advisors provide the industry's most responsive customer service, making sure that your systems and infrastructure are operating optimally and securely. These highly trained technical experts are always available live from 8:00 a.m. to 6:00 p.m. ET, Monday through Friday. We also offer on-call support through 9:30 p.m. ET during the week.
